# one.network: Plan Share

Plan Share lets users create, manage and submit TTRO applications and documentation inside one.network.

A simple, more efficient plan submission and approval process

Plan Share makes the plan submission process more efficient by enabling a simple inter-organisational workflow, where users can submit traffic management plans and TTRO applications digitally from inside one.network.

Interested in a test drive?

Get in touch

Plan Share submission and chat function.

Streamline the submission process

Improve submission workflow efficiency

Design, create and submit traffic management plans and TTRO applications from a single integrated platform.

Get greater visibility

Highway Authorities can maintain visibility of all third-party applications, and utilities and contractors can gain a greater understanding of the approvals process.

Increase permit and plan approvals

Utilities increase their chances of having plans and permits approved. Similarly, highway authorities can interpret, share and respond to submissions more efficiently.

Plan, communicate and analyse every road event

Requirements:

- Part of our Planning and Coordination package.
- Requires a subscription to either our Essentials or Professional package.

one.network: Plan Share

Plan Share lets users create, manage and submit TTRO applications and documentation inside one.network.

How it helps

Plan Share eliminates the need for emails, separate documents and double keying information, by allowing traffic management plans to be passed directly between works promoters and highway authorities on a single interface.

With Plan Share, users can:

- **Improve** submission workflow efficiency with the ability to design, create and submit traffic management plans and TTRO applications from a single integrated platform.

- **Get** greater visibility. Highway authorities can maintain visibility of all third-party applications and utilities and contractors can gain a greater understanding of the approvals process.

- **Increase** permit and plan approvals through collaborative use of the same platform by both highway authorities and utilities. This allows highway authorities to interpret, share and respond to submissions more efficiently.

- **Reduce** human error on applications using automatic document templates to improve application effciency and accuracy, fulfil highway authority requirements by default and ensure fewer erroneous submissions.

Features

- Automatic creation and submission of TTRO application documentation.

- Approval and rejection capabilities for highway authorities.

- Chat functionality for highway authorities and utility companies to communicate about applications.

Plan, communicate and analyse every road event
