All the data on a simple map-interface

Improve communication

Highway authorities can communicate authoritative up-to-date information about roadworks, events and other activities on the highways.
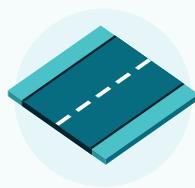

Get full visibility

Utility companies, contractors, bus operators and emergency services can rely on the one.network map for accurate and current infromation about works.

Set up automated email alerts

Automated email updates to key stakeholders about chosen works to deliver important updates and information straight to their inboxes.

Plan, communicate and analyse every road event

one.network map + integrations

The UK's single source of truth for information about road-works and traffic disruptions.

one.network

How it works

Our map serves **27 million enquiries every year**, giving the public oversight of everything happening on the roads for free.

Premium Map access allows highway authorities, utility companies, contractors, emergency services and event planning organisations full visibility of everything happening on the road network, to help make planning easier.

We collect data from local and national highway authority road systems, DfT Street Manager, numerous urban traffic management control systems and directly from highway authorities and utility companies.

We have **over 30 map layers** including a variety of standard layers such as roadworks, diversions and bus stops and routes, as well as multiple operational map layers, ranging from Section 58 restrictions, to NSG data, to speed limits.

Real-time integration data layers

We also have real-time integration data layers including:

- CCTV traffic cameras

- Variable message signs

- Live parking availability & incidents feeds

- Google live traffic

- Waze live incidents

- TomTom live traffic & incidents

We can even accomodate custom datasets and embed the one.network map into your organisation's website.

Plan, communicate and analyse every road event
